

Gen-Equip: Equipping European Primary Care Health Professionals to Deal with Genetics

PRIMARY CARE GENETICS WORKSHOP

Friday 5th May, 2017

30 Euston Square, London

(in the headquarters of the Royal College of General Practitioners).

This workshop is suitable for all professionals in primary care, including general practitioners, community paediatricians, midwives, primary care nurses and those involved in education of primary care professionals.

The aim of this workshop is to:

- **Share best practice on facilitating good standards of genetic healthcare in primary care practice**
- **Introduce the series of online educational material available to primary care professionals and discuss how they can be used.**

Cost: As this event is subsidised by our European grant, we can offer free registration (this includes lunch and refreshments).

However, fellowships are available for those without other funding to attend this event. Please ask about help with your travel costs.

For enquiries or bookings – email heather.skirton@plymouth.ac.uk

The Gen-Equip project [www.primarycaregenetics.org] is partly funded by the EU Erasmus+ programme and is the work of partners from six European countries. We have developed a programme of online learning modules and tools to support daily practice in primary care. These are available online, free of charge.
